

AgComplyIT Known Issues

9/1/05

The issues we ran into on Windows were these:

- There is one link to an Excel spreadsheet that does not work when using Office 2000.
- The spreadsheet ran VERY slowly on one of the Windows machines and I figured out that it was actually a printer issue. There is some code that changes the margins on some of the results sheets and when it got to that line of code the computer went looking for the printer and couldn't find it very quickly. When we changed the default printer, the application ran very quickly.

We also discovered that if you have Acrobat Reader and Microsoft Word already open before you click on the links, the documents open much more quickly.

Finally, these two links show up on both the Employer sheet and the Migrant Housing Action Plan:

- UC_APMP_Worker_Housing.pdf
- FarmWorkHousing.sutter.pdf

Those two links are actually the same document. I think we can probably just ignore that, but thought you might want to know for future reference.

Important - Start Here

AgComplyIT works on Windows 2000, Windows XP and XP Professional.
Mac users should use OS 9.x

You will need to set your Excel security to medium or less in order to enable the necessary Macros. Instructions are in the *User Manual*.

Contrary to the instruction in the *Read Me First* and the *User Manual*, you must create a new folder on the C drive in your PC called AgComplyIT, then drag the files and resource folder from the compact disk into your new folder. Mac users drag the AgComplyIT folder on the CD to your desktop.

After you have answered the questions and your compliance plan worksheets have been created, the links from your worksheets to the PDF files in the Resource Folder don't work. However all of these files are contained in the Resource folder and are easily accessed. A version of AgComplyIT that *will* automatically link to the Resource folder is available for download at the website: www.AgComplyIT.com *or* <http://www.cdfa.ca.gov/exec/aep/aes/AgReg/index.htm>

If you are on line, worksheet web links to the agencies function by clicking the left side of the link
